# EXPERIENCE THE EXTRAORDINARY

Crafting Tomorrow's Classics, Today's Perfection...

Experience the affjire of contemporary design with our inventive crexions

## About us

At NAVKARTouch, our unwavering commitment to excellence is the foundation of our enduring success. We meticulously curate our laminates to align with our clients' discerning tastes and interior aspirations. Our artistically crafted laminates come in a spectrum of cool hues, offering a wide range of options to suit any design vision. We consistently explore innovative color palettes and textures to ensure that our clients have access to the very best in the industry. Our relentless pursuit of quality has garnered the unwavering love and trust of our esteemed customers. We firmly believe that true peace of mind begins at home, and our laminates are designed to enhance the beauty and serenity of your living spaces.

## UNDERSTAND 6H SURFACE

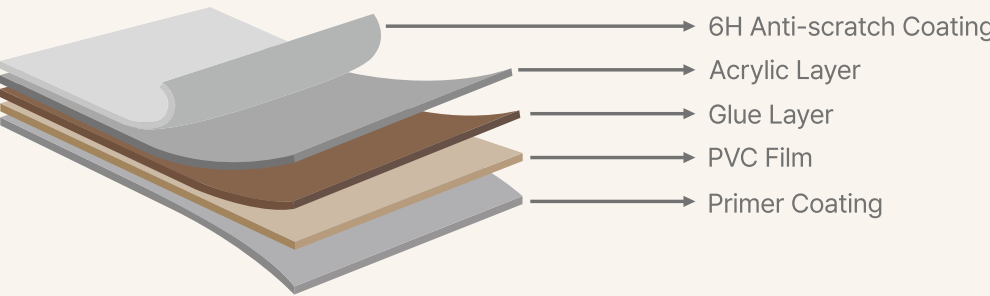

The term "6H Surface" refers to a level of hardness based on the pencil hardness scale, where "H" denotes hardness. A 6H rating indicates a high level of scratch resistance, equivalent to that of a 6H pencil. This means the surface is highly resistant to scratches, offering enhanced durability. Such high scratch resistance is especially desirable in premium materials, and 6H-rated acrylic is considered a top-quality option. It is widely used in applications like furniture, cabinetry, and kitchen surfaces, where long-lasting and scratch-resistant finishes are valued.

| Parameters                        | NAVKAReAcrylic Laminate | High Gloss Laminate Mica | PU Coating / Duco Paint | Back Painted Glass |
|-----------------------------------|-------------------------|--------------------------|-------------------------|--------------------|
| Gloss Level                       | >90                     | >70                      | >85                     | >85                |

## APPLICATIONS

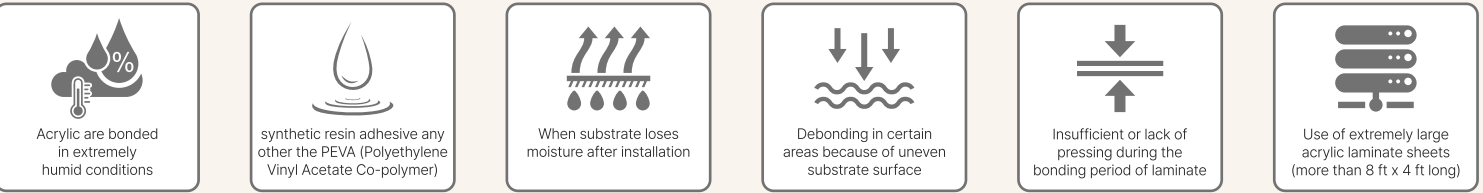

## Layer of ACRYLIC

## REASONS FOR AIR BUBBLE FORMATIONS ON ACRYLIC SHEETS

To avoid delamination / air bubbles in between surface laminate and plywood (or any other suitable substrate) the below points need to take care of it.

## CAUSES OF YELLOW PATCHES AND COLOUR FADING AFTER INSTALLATION:

## CAUSES OF CRACK LINES OR STRETCH LINES IN ACRYLIC LAMINATE SHEETS.

To avoid the inside cracks & stretch line **Do not store acrylic sheet in roll form.**

Please open the roll immediately. Do not pressurize while opening roll

Shake it well and light spray on the surface

Wipe the surface clean using a light circular motion

## Ways To Prevent Acrylic Laminate From Color Fade Or Yellowing

- Do not expose your Acrylic Laminates furniture to direct sunlight, it may cause discolouring, fading and yellowing of the laminates.
- Don't use inferior quality chemical dipped plywood as it can react with adhesive which may cause yellow patches after the installation.
- Don't use synthetic rubber (S.R.) adhesive for bonding as it may lead to brown/colored patches on Acrylic Laminates.
- Don't place hot cookware directly on the Acrylic Laminates.
- Prolonged exposure of Acrylic Laminate above 30-degree temperature should be avoided.

## Follow some steps mentioned as below to maintain Acrylic Laminates.

- To clean the surface of Acrylic Laminates do not use thinner.
- Wipe the surface gently with a non-abrasive cloth.
- Avoid the use of abrasive liquid cleansers, bleaching compounds or solutions as these may damage the surface of the laminates.
- Use mild household glass cleaner to remove more stubborn stains.
- You can use normal water also for cleaning.
- Do not place hot cookware directly on the Acrylic Laminate.

## How To Apply

- Use balancing sheet on backside.
- Always clean the dust particles properly from the substrate (plywood, MDF, Particle Board) surface by cloth or soft brush.
- Always use good quality branded adhesive to stick Acrylic Laminate on substrate. Please don't add water in adhesive before using it.
- Spread the adhesive uniformly by brush, roller or adhesive spreader on Acrylic Laminate and base substrate (Plywood, MDF, Particle Board).
- It is necessary to remove the air between Acrylic Laminate and substrate. Please leave minimum 2mm of groove between two pieces of Acrylic Laminate.
- At the time of pressing Acrylic Laminate on base substrate (Plywood, MDF, Particle Board) always use soft pinch roller or normal pressing technique to protect surface from any damage.
- The pressing should be done from the middle of the panel and move towards to the sideline and corners of the panel.
- For better bonding of Acrylic Laminate on substrate, press it for minimum 12 to 15 hours.
- Peel off the protective film within 15 days of installation.
