# THE FINEST GAME WORK FOR THE FINEST LIVING !!

Wood - A natural way to store carbon. World studies have shown that being surrounded by wood in your home, work or school has positive effects on our health. Exposure to wood products and interiors created similar health benefits to those created by spending time in nature.

# JOURNEY BACK TO COLOUR

What is wood?

Environmentally friendly, it looks great, it's warm and cozy, it's super-strong, and it lasts hundreds or even thousands of years. It's wood—and it's quite possibly the most useful and versatile material on the planet, with many thousands of different uses. Wood has been an important construction material since humans began building shelters, houses, and boats. It has been used since ancient times and it still remains in modern civilization. Domestic constructions made out of wood were popular many years ago and are still widely used.

Houses, buildings, and cities are empty spaces without the people who live there. Keeping in mind this awareness that navkar since many years now has designed and produced surfaces in Laminate where functionality meets beauty, novelty completes tradition and technology is at the service of a man. Technologies exude Welmica's solidity and reliability which is completely based on style, taste, and passion we have for ceramics and love for beauty.
