Inspired by Light

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leaentially unchanged. It was popularised in the 1960s.

Laying Instructions for HPL Laminate Sheets

Before use ensures that the surface or plywood and laminates is Clean, Dry, Leveled and free of Oil, Excess moisture or other contaminants, such as dust, synthetic particles, etc. Only use white PVA Adhesive to stick the sheet. Apply Double Layer of Adhesive on Edge (Minimum 3-4 Inch) of Both The Surfaces. The adhesive should always be stirred before use. Sufficient adhesive should be applied on both of the surface to be bonded. Don't add water into the adhesive, it makes the bonding weak. Once adhesive applied is trickily in nature (Usually requires 5-10 minutes, depending on atmospheric conditions), the laminate should be placed on the surface, accurately aligned. Sufficient bonding procedure to ensure intimate contact necessary for an adequate bond should be applied over the entire area using as much as procedure as possible as possible without damaging the assembly.

Pinch rollers (Rotary Press) and heavy weighted rollers are ideal; Hand rolling should be done from the centre to the edges to ensure the removal of air bubbles. The edges should be rolled twice. For Satisfactory bonding, the area in question should be kept under pressure fir a period of 12-18 hours (Depending on atmospheric conditions). In rainy season or when humidity is too high, moisture may condense on the surface during drying (Know as "Blushing") and will prevent an acceptable. Hot Spray or Forced air drying may be used to help prevent this condition.

- It is recommended that the maximum sheet size used for vertical field application be limited to 610x2440 mm (2x8 Ft.).
- When laminate is pasted vertically, Maintain uniform pressure on all sides till adhesive is dried.
- To avoid stress cracking, avoid making cut out having sharp corners and rough edges.
- A gap of minimum 2 mm should be maintained between two laminates while pasting side by side.
- Due to transportation limitations laid the laminate sheet on flat surface in between 2 plywood sheets for minimum 48 Hrs.
